*February 11, 2005*

As Lectrotab production settles in for its eighth year, the whole process continues to be a smooth and efficient exercise. Our suppliers are now providing our components, built correctly and delivered on time. Our current production machinery and molds are good for several more years but new, high production molds are already in process. We have also designed a new “pegging” machine which drills the holes for, and inserts the four white pegs which hold the actuator together; this new machine will operate about four times faster than the present one. And incidentally, the present one is about ten times faster than the original one was.

The multi-station “OVAL” control is on track to be available late next summer and will retain the shorting, or quick stop feature, even though it is multi-station. Incidentally, the OVAL is already widely accepted and it is proving to be very reliable.

Observation: As we enter our eighth year, the whole Lectrotab program is running quite smoothly and the Lectrotab products are performing quite reliably. While we are still ready with answers, you guys are not asking enough questions to fill up a weekly *MAILCALL*, so, with this issue, we are going to try a bi-weekly schedule.

Next issue is Friday, February 25<sup>th</sup>, but let us hear from you in the meantime. Use [mailcall@lectrotab.com](mailto:mailcall@lectrotab.com) for your reply. Our responses will be very quick.

Best Regards,

Lectrotab Sales
