March 17, 2006

Testing the new wireless Oval has resulted in a change which will be very handy. Instead of one button at the bottom center, as noted in the last mail call, we will have two buttons, one to the left and one to the right. The one to the left will be for deploy and the one to the right for retract. At any time; with the tabs up, half down or whatever, one tap on the left will start both tabs down together. A second tap will stop them. One tap on the right button will start both tabs up. A second tap will stop them.

Here is how this feature will be handy. At initial power up, tap the left button for both tabs down. As both deploy, the boat will get on plane. To stop them, touch the left button again. But maybe you now have too much for cruising, so tap the right button to initiate retraction and again when you have it right. Also while they are deploying, you can go directly to the right button where one tap will stop the down and start them up. Then another tap when they are right. Now you can use the two rocker switches to take care of left right trim. The operation of these two buttons will be covered in the new wireless Oval patents.

Lectrotab sales are up 35% over last February, largely due to your efforts; Sincere thanks.

Next issue is Friday, March 31st, so let us hear from you in the meantime. Use mailcall@lectrotab.com for your reply. Our responses will be quick.

Best Regards,

Lectrotab Sales
