Friday June 10, 2005

A new single station version of the present Oval will be shipping about August 1st. Two models will be available; the SETR-20, which is the present gray color and the SETR-21, which will be all black with white lettering. Both will have one additional feature wherein the indicators can be programmed to match actuator stroke times from 4 to 12 seconds. They will be shipped programmed for 8 seconds but can be changed at any time to 4, 5, 6, 7, 8, 9, 10, 11 or 12 seconds. This programmable procedure is in the instructions and is done with the two switches on the face of the control. We needed to provide this capability to accommodate our 4 second actuators as well as some long stroke actuators we may supply in the future, so we went ahead with 4 through 12 seconds.

The multi-station Oval is scheduled for delivery in December and will feature both colors and programmable stroke time in addition to the multi-station capability.

Based on field experience, we have made some mechanical and corrosion resistant improvements in the Autoset keypad and have also changed the tab retract key nomenclature from AUTO RET to TABS UP. We began shipping these today.

Next issue is Friday, June 10th, but let us hear from you in the meantime. Use mailcall@lectrotab.com for your reply. Our responses will be very quick.

Best Regards,

Lectrotab Sales
