The SETR-10, "Oval" control is in production now and is checking out well. Night testing indicates that the level of display dimming is truly dim enough to preclude any interference with night operations. In my experience, every lit display I have ever owned has been too bright at night so we paid particular attention to this factor and we have it right.

As we noted when we were concepting the Oval control, it was to have a good look, offer the most important trim tab control features and be waterproof. This we have done, but we also designed it to be a stand alone product in that it does not interface with, and is not usable with, any of the other Lectrotab switches or controls. It's one Oval per boat and that's it, except that you can connect the TI-8 indicator to the Oval if you wish; but not remote rocker switches, the Autoset or the TI-4.

More next week but let us hear from you in the meantime. Use mailcall@lectrotab.com for your reply. Our responses will continue to be very quick!

Best Regards,

L. Jeremy Crews
