

TAB TALK

Email To All Lectrotab Users

Issue 18, December 5, 2007

For 2008 and beyond, Lectrotab is the newest trim tab system being offered, with a product line more complete than any other. Lectrotab has it all, in a quick to install, non-hydraulic, completely green, maintenance free design, backed by a no-nonsense 5 year warranty. The Lectrotab electromechanical tab actuator is a patented, precision product, which is quiet and powerful. Reliability is assured by a patented actuator sealing system, and a sealed and waterproof, microprocessor based, tab control. Take a look!

Actuators: • Two overall lengths, 10” and 12” • 4, 6 and 8 second stroke time • 12 and 24 VDC models • Wire lengths available to 28’ • Fully rotatable upper brackets in 4 styles • Custom brackets available; if you can draw it, we can make it • Corrosion proof, with NO metal showing! • Patented seal protection and patented internal pressurization system.

Tabs: • Stainless steel with a rolled and pinned hinge - no spot welds • 9” and 12” chord, in 7 standard widths to 42” • Custom sizes in any chord length, with turn-ups, tapers, powder coated and multiple actuators. If you can draw it, we can make it • Alloy tabs in 9” and 12” chord, in any width to 36”, and any color. • Alloy hinge is polypropylene and guaranteed 100,000 cycles to 90°. Don’t judge it until you see it. • Lighter, stronger and less costly than stainless.

Controls: • Single rocker switches for you to install in your panel • Dual, pre-wired, rocker switch / panel assembly. • 2 1/16” round tab position indicator available for use with the standard rocker switches. Installs anywhere and automatically dims at night. • The patented Lectrotab “Oval”; microprocessor based, sealed, waterproof, multi-station capable, full function control with control switches, tab position indicators, automatic display dimming and tab retract at switch off. Surface mounted, with one piece and no remote box to wire. The display format is programmable in the field. • The Lectrotab “wireless”, which has all of the features of the “Oval”, as described above, except smaller in size and has two additional buttons; an “All Up” button and an “All Down” button, for one touch tabs up or down. And the tabs can be stopped while in transit with another tap of the button, and tapped again to continue. But mainly it is wireless. NO wires to pull from the transom to the console. This can save considerable installation time, especially for a retrofit installation, or a conversion from other brands to Lectrotab.

Accessories: • Interconnect wire, terminal strips, hardware and whatever else you might need. If it’s needed to fill your order, we can make it happen.

Thanks for the chat – We have enjoyed serving your trim tab needs through 2007 and look forward to 2008. We are growing and we need your input to insure that the way we grow, suits your needs. Give us a call, toll free, 888-LECTROTAB (532-8768). Two rings and no buttons to push. Tab Talk is available via email, or by fax, or from our website, www.lectrotab.com.

Regards,

L. Jeremy Crews
